Intermediate balance of food and drink exports January to June 2001

During the first six months of 2001, exports of food and drink products have grown 6.5% compared to the same period last year in 2000. The 1999 crisis was followed by an important recovery of exports during 2000 and 2001 allowing export levels to return to the levels reached prior to this period. So, compared with the 1st half year of 1998, general exports of the sector have increased to around 4%.

It should be noted that in general 45 to 47% of food and drink exports are carried out during the first quarter (full data for the whole year 2001 will be available as from the then of July 2002).

Beverages compose, with 29%, the largest part of Community exports, followed by various processed products (chocolates, sweets, prepared meals) which represent 25%. Meat products and processed dairy products add up to 10% and 11,8% respectively, in Community exports of food products during the first quarter of 2001

Although the general situation is satisfactory, the analysis per sector is still quite flawed. For a number of products, exports strive to reach the level of exports such as they were prior to the 1999 crises. Such is the case notably for meat products that are sharply inferior compared to 2000 (-4,6%) and in 1998 (-12,2%). In general oils and fats are also quite beneath their level of 1998 (-19%). Milling and starch products also register a decrease of –9,5% compared to the preceding year (12,2% compared with 1998), which is explained by the weakest running of exports as regards flour.

On the other hand, fish products and processed fruit and vegetables show good export performance by registering an increases of 18% and 9% respectively, compared to the preceding year.

Exports of beverages, notably beer, spirits and wines were hardly affected by the 1999 rupture. They increase by 7,7% compared with the same period in 2000 and, compared to 1998 go beyond the 25%. The "other products" category, comprising sugar, prepared foods, biscuits and pastry, have registered a high increase (+16,5%) between 2000 and 2001. This result needs

still be put in perspective, because when comparing 2001 exports with those of 1998, the increase is only of 3%. On the other hand, prepared foods within this category confirm a high increase (+43%).
